REASONS FOR ALLOWANCE

Claims 9, 11-13, 15-17 and 19-20 are allowed. The following is an Examiner's statement of reasons for allowance:

Independent claim 9 of the present application teaches a system for checking a data transfer for an error, the system comprising: means for identifying a boundary of the data transfer based on a first assumption that a first two bytes of a transmission control protocol (TCP) payload includes a marker with protocol data unit alignment (MPA) protocol length field; means for calculating a cyclical redundancy check (CRC) value based on the first assumption and a second assumption that the data transfer includes at least one aligned direct data placement (DDP) segment, wherein the calculating means further calculates a TCP checksum value, and wherein the calculating means calculates the CRC value and the TCP checksum value in parallel; and wherein the data transfer includes an MPA length field that includes an entire MPA frame including: fourteen most-significant bits (MSBs) of the MPA length field, an upper layer protocol (ULP) payload length, all MPA markers, CRC data, two least-significant bits (LSBs) of the MPA length field, and any valid bits in MPA padding. The foregoing limitations are not found in the prior arts of record. Particularly, none of the prior arts of record teach nor fairly suggest, "...means for identifying a boundary of the data transfer based on a first assumption that a first two bytes of a transmission control protocol (TCP) payload includes a marker with protocol data unit alignment (MPA) protocol length field; means for calculating a cyclical redundancy check (CRC) value based on the first assumption and a second assumption that the data transfer includes at least one aligned direct data placement (DDP) segment, wherein the calculating means further calculates a TCP checksum value, and wherein the calculating means

Art Unit: 2112

calculates the CRC value and the TCP checksum value in parallel; and *wherein the data transfer includes an MPA length field that includes an entire MPA frame including: fourteen most-significant bits (MSBs) of the MPA length field, an upper layer protocol (ULP) payload length, all MPA markers, CRC data, two least-significant bits (LSBs) of the MPA length field, and any valid bits in MPA padding.*”

Independent claim 17 includes similar limitations of independent claim 9 and therefore is allowed for similar reasons.

Dependent claims 11-13, 15, 16, 19 and 20 depend from allowable independent claims and inherently include limitations therein and therefore are allowed as well.
